Evaluating a Bug report
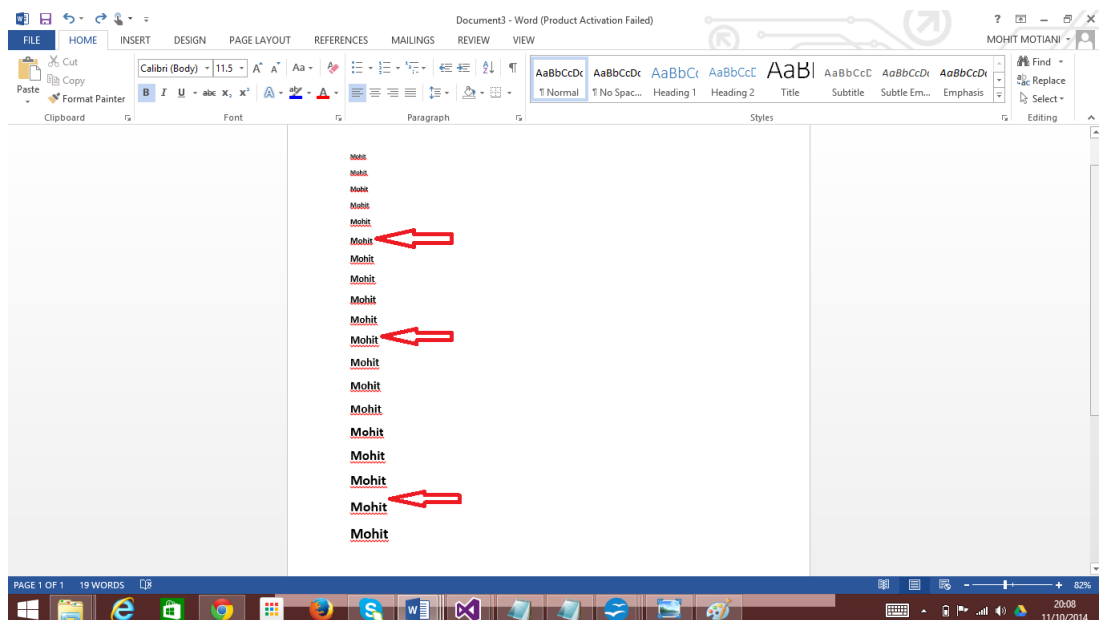

Replicated the bug successfully under the following environment and configuration.

Operating System: Windows 8
System Type: 64-bit Operating System
Open Office Version: 4.1.1
Build: 9590 – Rev: 1327774

Steps and Observations to encounter the bug

➢ I started testing my name with different font size in Ms-word.
➢ I started with font size-7 and incrementing 0.5 in every step till 17.
➢ In order to make text more clear, I have highlighted the text.
➢ From the pitcher below, it is can be clearly seen that the spacing between all the lines is constant throughout.

➢ Now, I have performed the same steps in open office version 4.1.1
➢ Starting from font size-7 to 17 with a constant increment of 0.5 on each and every step.
➢ In order to make text more clear, it has been highlighted.
➢ From the pitcher below, it can be clearly seen that the spacing between all the lines are not constant at all. They are changing as the font size changes in every step.

The bug is important to user. With a document with more than 1000 lines of text, it is almost impossible to change spacing between each and every line where text with different font size is required.

I agree with the comment of Mohammed Kuranga that comparing the open office outputs to the outputs from the Microsoft office word spacing problem was not present. It is only present in open office not in MS office. So the bug needs to be taken care of.
